

Are You Storm Ready?

The City of Beaumont, in conjunction with multiple agencies, have designed a public information portal on the City website, with information on the potential for flash flooding and debris flows within City limits. Solera properties bordering the golf course on the East side of our community have been identified as bordering the most westerly 'Noble H' risk area.

Public Safety officials will utilize zones to alert residents of emergencies and to conduct evacuations. By knowing your zone, you will be able to quickly react when evacuations are called for. It is important to plan ahead of time so that you can evacuate safely.

During evacuation warnings and orders, you should leave immediately and **seek shelter outside all evacuation zones**. If you do not evacuate when evacuations are called for you could be isolated and trapped without help for many days, with roads impassable and utilities disrupted or destroyed.

Flood Facts:

- Flooding is the most common natural disaster in Riverside County
- Many people living in a flood zone are unaware that they are.
- Homeowners' insurance typically does not cover flood damage.
- Just a few inches of water from a flood can cause tens of thousands of dollars in damage.
- A car can easily be carried away by just one foot of rushing water.
- Flash flooding in a burn scar is most likely during the immediate 2 years after a fire; however, the risk is still elevated until vegetation is reestablished.

Alert RivCo is used to alert Riverside County community members of urgent actions to take during disasters. Pay attention to these warnings to determine what you need to do and where to go.
